Experiment 20: Generate and Compare Responses for Multiple Prompts Using a Pre-trained LLM

Python Program

```
from transformers import pipeline

llm = pipeline("text-generation", model="gpt2")

prompts = [

    "Artificial Intelligence is",

    "Python programming is",

    "Climate change causes"

]

for prompt in prompts:

    result = llm(prompt, max_new_tokens=20,

                 do_sample=False, pad_token_id=50256)

    print("\nPrompt:", prompt)

    print("Response:", result[0]["generated_text"])Output
```

Output

```

 years. It is a field that has
[transformers] Both `max_new_tokens` (=20) and `max_length`(=50) seem to have been set. `max_new_tokens` will take precedence. Please refer to the documentation for more information. (https://huggingface.co/docs/transformers/main/en/main_classes/text_generation)

Prompt: Python programming is
Response: Python programming is a very complex language, and it's hard to understand how it works.

The main problem
[transformers] Both `max_new_tokens` (=20) and `max_length`(=50) seem to have been set. `max_new_tokens` will take precedence. Please refer to the documentation for more information. (https://huggingface.co/docs/transformers/main/en/main_classes/text_generation)

Prompt: Climate change causes
Response: Climate change causes the climate to change, and the climate is changing.

The climate is changing because of human
